

# Minutes20091105

From MTU LUG wiki

- Agenda:
1. Server Status
    - Bunch of boring stuff about shell server.
  1. General Biz
    - None
  2. Penguincon (\$40 Tickets)
    - Open source hardware/software and sci-fi convention downstate. (see <http://www.penguincon.org>)
    - LUG can pay some for the tickets to help with costs.
    - About 9 people here are interested.
  3. Open Floor
    - Ubuntu replacing GDM with something that doesn't suck?
  4. Compiz-Desktop (presentation by Dan Williams)
    - Freerws plugin is neat, lets you rotate windows
    - GNOME v3 is shown, quite heavy, completely redesigned.
    - Compiz is being run stand-alone without GNOME. Runs smooth, has dock, spiffy effects.
    - `/usr/local/bin/start-fusion.sh` shown, script to start default programs.
    - "Time to show off Enlightenment 17" (supposed release in December)
    - Taskbar is on fire. Lightweight - able to run on 800MHz, 256MB RAM machine without lag.
    - Fire is eating CPU though. CPU use down when disabled. Rendering is done in software :(
  5. Q/A
  6. Shell Server
