

Jabber

From MTU LUG wiki

The LUG currently runs a Jabber server. Jabber is an open source instant messaging service which relies on independent servers. Once you have registered on a Jabber server, you can send messages to users on most other Jabber servers.

Once you've registered with LUG, your screenname will look like: foo@lug.mtu.edu.

To register, simply open up a client that supports Jabber (Pidgin[1] (<http://www.pidgin.im/>) is great!) and add a new account. Then just enter the required information (see picture).

The image shows a screenshot of a software dialog box titled "Add Account". The dialog is divided into two sections: "Login Options" and "Advanced Options".

Login Options:

- Protocol: Jabber (selected in a dropdown menu)
- Screen Name: screenname
- Server: lug.mtu.edu
- Resource: Gaim
- Password: *****
- Alias: My Name

Advanced Options:

- Remember password
- Auto-login
- [Show more options](#)

At the bottom of the dialog are three buttons: Register, Cancel, and Save.
